

Key takeaways

Why do we need AI Fluency?

I think that AI changes very quickly, and it is getting more complicated. The gaps of how to use AI between people are dramatically increasing.

What is AI fluency?

Learn to collaborate with AI effectively, efficiently, ethically, and safely

Three ways to interact with AI

- Automation: AI does work for you following explicit instructions
- Augmentation: You and the AI collaboratively work together
- Agency: AI works independently on your behalf

The 4D Framework

- Delegation: separate which tasks should be done by you and AI
- Discernment: output correct and useful? right approach? behaving as desired?
- Diligence: ensuring accuracy and taking responsibility, honesty, transparency, ethical use and critical awareness

- Description: Final output to be, how to behave, and approach to a problem
