

Designing effective instructions -> crafting your questions and providing context

6 foundational prompting tips

1. Provide Context

- Asking with details, why am i asking for, how to answer to me

2. Offer Example

- give a few examples of questions - answer sets

3. Specify Output constraints

- include details of output

4. Break down complex tasks

- give orders how to approach the problem or solve problem step by step

5. Give the AI space to think

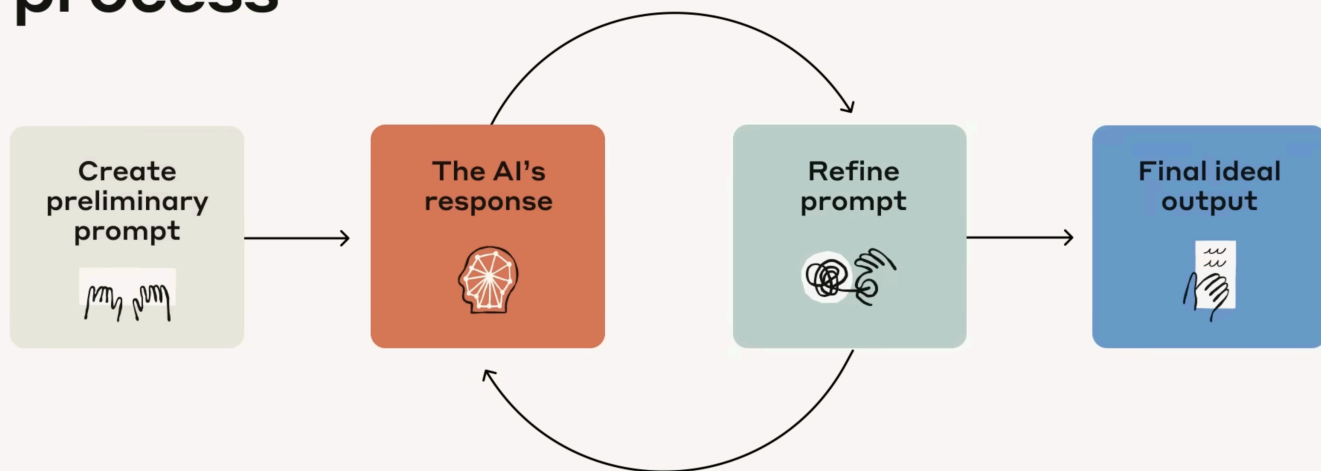

- tell AI that mentioning "Before answering please think through this problem carefully"
- prob, they are made by answering fast, so mention you have time to think enough

6. Define roles

- using persona.. like act as ..
- As a UX design expert... As a financial trading researcher...

PROMPTING !

The iterative process

Initial prompting -> answer <-> refine prompt -> final output
